OCEAN FACTS!

The world's oceans contain enough water to fill a cube with edges over 1,000 kilometers (621 miles) in length.

Around 70% of the Earth's surface is covered by oceans.

Ocean tides are caused by the Earth rotating while the Moon and Sun's gravitational pull acts on the water.

The largest ocean on Earth is the Pacific Ocean. It covers around 30% of the Earth's surface.

The Atlantic Ocean's name refers to Atlas of Greek mythology.

The second largest ocea on Earth is the Atlantic Ocean. It covers over 21% of the Earth's surface.

The Pacific Ocean's name has an original meaning of 'peaceful sea'.

During winter the Arctic Ocean is almost completely covered in sea ice.

The Pacific Ocean contains around 25,000 different islands, many more than are found in Earth's other oceans.
